30gm
\$40.00

Easy-to-Use

Apply 2-4gm as directed
by physician 30 minutes
before procedure

BLT CREAM topical anesthetic contains 3 powerful ingredients that work together.

| Active Ingredients | Mechanism of Action/Purpose |
|---------------------|--|
| 1. Benzocaine 20% | Among the most widely used anesthetics in medicine today. Benzocaine is effective by way of blocking voltage-dependent sodium channels on neuron membranes. Benzocaine also has a rapid onset and is comparatively well-tolerated, making it preferred for a variety of functions. |
| 2. Lidocaine 8%-23% | Lidocaine blocks sodium channels which, when applied to the skin, prevents local neurons from signaling the brain. When applied topically, the onset of Lidocaine is a quick 4 minutes. |
| 3. Tetracaine 4%-7% | A longer acting anesthetic that functions by altering the function of ry-anodine receptors that control the distribution of intracellular calcium. Tetracaine has a longer onset time than the other two anesthetics. |
