This facsimile transmission is intended to be delivered to the named addressee and may contain information that is confidential, privileged, and proprietary or exempt from disclosure under applicable law. If it is received by anyone other than the names addressee, the recipient should immediately notify the sender at the address and/or telephone number set forth herein and obtains instructions as to the disposal of the transmitted material. In no event should such material be read or retained by anyone other than the addressee, except by express authority of the sender to the named addressee. FDA does not review compounded medication for safety or efficacy.

How to apply H5 Formula

1. Apply 20-30 drops (depending on area of coverage necessary) into scalp area of hair loss 2-3 hours before bedtime. **Maximum of 40 drops per day.** Do not rinse off scalp for the next 6 hours; allow for medication to absorb. It is normal for scalp and hair to become sticky.
2. Stay standing and do not lay down for 30 minutes. **Avoid contact with eyes.**
3. Wash hands after use.
4. Best to apply at night 2-3 hours before bedtime, then shower in the morning at least 6 hours from applying the medication.

Online Order Forms

1. Visit www.biomedrelief.com
2. Click the "Prescribe Now" button
3. Click on "Hair Loss" button
4. Print the H5 Rx form
5. Bring H5 Rx form to your doctor to discuss your options

Or have your doctor call 855. 246. 6338 to order by phone

FDA approved treatments for hair loss (Alopecia)

There are currently two treatments approved by the FDA for treatment of miniaturization of hair-follicles from Androgenic Alopecia (AGA).

- **Finasteride (Propecia)** - The American Hair Loss Association notes finasteride is a prescription oral treatment for male pattern baldness. It reportedly reduces the active levels of dihydrotestosterone (DHT) in the body, therefore, preventing the miniaturization of hair follicles. Many men who are prescribed finasteride to be taken orally experience significant side effects which may reduce quality of life. These side effect may include loss of libido, erectile dysfunction, hypogonadism and gynecomastia.

- **Minoxidil** - A topical treatment that has been used since the 1990's to treat baldness in men and women. It reportedly promotes new hair growth by increasing cutaneous blood flow to shrinking hair follicles. This may cause follicles in the telogen phase to shed, which are then replaced by thicker hairs in a new anagen phase.

Other medications can be effective in the treatment of alopecia when applied directly to the scalp. BioMed Specialty Pharmacy offers compounded formulas that combine FDA approved medications and alternative therapies creating a custom product that may treat, prevent and reverse hair thinning and loss due to Androgenic Alopecia (AGA).

BioMed H5 topical solution contains the following active ingredients

- **Minoxidil fortified with finasteride** - Finasteride acts by reducing DHT, thereby inhibiting miniaturization of hair follicles in patients with Androgenic Alopecia (AGA). Scalp-applied topical finasteride with minoxidil can be considered for hair density improvement in combination with or without oral finasteride.
- **Azelaic Acid** - A naturally occurring substance found in whole grains that contains a mild antibiotic designed to reduce harmful bacteria from the skin. It is also said to be a potential inhibitor of 5-alpha-reductase in human skin. A reduction of this enzyme reduces the amount of DHT in the body and, therefore, can have a similar effect to finasteride; the active ingredient in the FDA approved oral hair loss medication finasteride.
- **Ketoconazole** - Ketoconazole, an anti-fungal medication, can also be effective in stimulating new hair growth for sufferers of Androgenic Alopecia (AGA). DHT is the hormone responsible for shrinking hair follicles in people who have this condition. In addition to killing fungi, ketoconazole is also helpful in countering the effects of DHT.

Before

After 8 Weeks

Actual photos of one of our pharmacist who used Formula H5 for two months.

Formula H5 contains multiple active ingredients for increased efficacy.

- Minoxidil 10%
(active ingredient in Rogaine)
- Azelac acid 2%
- Ketoconazole 2%
- Tea tree oil 0.25%
- Finasteride 0.25%
(active ingredient in Propecia)

100ml/Cost \$89
200ml/Cost \$149

- ✓ **Results as early as 4-6 weeks**
- ✓ **Easily applied to the scalp**
- ✓ **Minimal to no side effects**
- ✓ **100% money back guarantee if no results**
